

• MAN

To connect a rearview camera (with or without motorized shutter) at MAN MMT2 (Harman) monitor.

The 90° angled HSD connector from model ADP-39 must be connected to Camera 1 input (purple) from the MAN MMT2 (Harman) monitor.

The yellow wire from model ADP-39 must be connected to position E9 in the ISO connector from the MAN MMT2 (Harman) monitor.

Note! Canbus activation must be selected ON by MAN workshop (in case not yet selected by MAN factory).

** In case 2 cameras are required (rearview and sideview), then interface model IF MMT2016-2C(H) should be applied, instead of model ADP-39.*

• Connection

ADP-39

(Shutter) Camera Adapter for MAN MMT2 (Harman) monitor
